Twin Balloon Pad

Fab-Con's operator friendly tensionless Twin Balloon Pad incorporates the latest in electronic technology to simplify operation, increase reliability, enhance performance and produce more consistent quality fabrics

Pad is shown with optional Entry with Skew/Torque Reduction System

The unique design, Patented STAR Ring Guide System, Automated De-twisting System, After-Spreaders and Exit System virtually eliminate fabric elongation and skew/torque.

The touch screen graphic interface sets and displays process parameters, and is programmable for fabric styles. Manual controls are also conveniently located at various points on the machine to allow quick and easy process adjustments.

Tension Compensator

Utilizes lightweight dancers to control fabric tension

After-Spreader System

For uniform fabric width control and enhanced drying efficiency

Dual Twin Balloon Pad

Fab-Con's single operator Dual Twin Balloon Pad is designed to process two independant strands of wet tubular knitted fabric after bleaching or dyeing
