

NEW

Hydro-Sizer®

This new revolutionary machine allows for “wet-compacting” of tubular knit fabrics including hydro-extraction, chemical application and compressive shrinkage prior to drying.

Torque Compensator

PLC programmed to allow instantaneous directional control, reduction in overall twist and reduce torque test averages

Tension Compensator

Utilizes lightweight dancers to control fabric tension

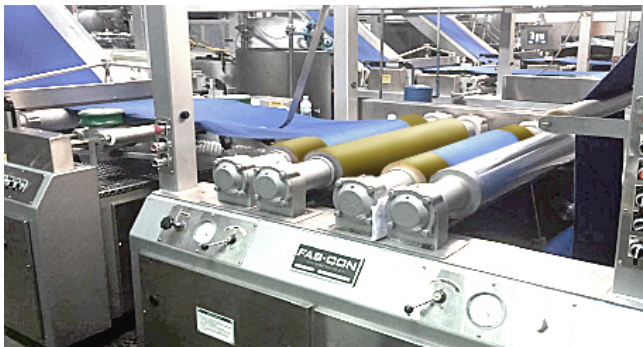

Photo Shows Multiple Hydro-Sizers in Operation

This patented design allows for reductions in fabric length shrinkage as well as skew/torque enabling the user to obtain the lowest shrinkage and torque on cotton knit fabrics as possible. Combined with a Gull-Wing StableSizer shrinkage can be reduced to less than 1% in lengthwise direction after (3) wash and tumble dry tests.

As garment retailers demand for lower shrinkage and torque “in-garment” the Hydro-Sizer makes it possible to meet the standards easily with no additional processing costs.

Extracting, Padding, Spreading, Compacting and Folding
